

Muenster Powder Coating and Design ltd.

Finalist for the Enterprise Saskatchewan Award for New Venture

Muenster Powder Coating and Design Ltd. (MCPD) provides a finishing process for a wide diversity of items including truck frames, semi and truck rims, bumpers, metal railings, garden arbors, and many other objects. The powder coating process involves electrostatically applying a fine plastic powder onto a substrate. Parts are then cured in an oven. The result is a uniform, attractive, and extremely durable finish. The powder coating process has low to zero VOC emissions which contributes to safe working environments for employees.

Demand for MCPD is continuing to grow as consumers and industry look for the benefits that powder coating provides. Financial objectives have been achieved and capacity goals have been met, including the addition of a third full-time employee.

Work/life balance is key and owners Dan and Jan Sylvestre stress that long term business goals are developed to create a well managed and sustainable business while living a healthy, balanced life. MPCD donates back to the community in the form of time, resources, money, and services.
